Despang Architekten – Inklusive Architektur

Despang Architects

The architecture office began its career with a competition entry to design the tram shelters for tram line D at the Expo 2000 in Hannover. Every shelter is clad with a different material, giving each one its own unique character.

Inclusive architecture

Since then the company has built a wide range of buildings using various design approaches all over Germany. A keen interest in sustainable design is evident in every project, for example, Home Office Oberhaching, located near Munich, the kindergarten in Göttingen, or the canteen for the German Federal Armed Forces, located in Stallberg, Viereck. The latter shows careful consideration and attention to cultural and artistic aspects, despite strict building regulations.
