New publication: Despang Architekten – Inklusive Architektur

Despang Architects

World architecture is a two-class society – comprising 10 percent large, global companies and 90 percent small and underrepresented companies. It is these smaller offices that characterize and have a significant impact on our everyday surroundings – often with innovative ideas that are brought to life with the construction of demanding and exciting buildings. Despang Architects is a prime example of just how impressive an impact an office that is not ‘world famous’ can have in the world of everyday architecture. The small Despang team comprises father Günther Despang, son Martin and daughter Cynthia, with Isabel Schlüpmann and together they produce local architecture that is influenced by the idea of “Glocalization” and draws inspiration from impressive global ideas. Despang Architects combines tradition with modernity, sustainability with aesthetic, architectural theory with construction practice, which results in local everyday architecture with a global character – inclusive architecture.

ff publishers

ff publishers has made it its mission to publicize the innovative heroes of everyday architecture, striving to make their work accessible to a wider audience. Founded by creative director Thomas Huwiler (Berlin) and architecture book author Chris van Uffelen (Stuttgart), this publishing company specializes in producing high-quality architect and building monographs. The books are published as a series and are also available as eBooks and Apps. The company makes innovative use of new digital technologies and this is reflected by the superior quality of eBooks and by the use of embedded multimedia content in the print versions.
