# Schulen - Bauten für die Allgemeinbildung

Architektur und Raumgestaltung

## Germany, Austria, Switzerland

The construction, expansion or remodeling of schools is a current topic in many communities, as buildings from the post-war period can no longer meet contemporary requirements. New electronic teaching aids and changing pedagogical concepts need a different learning and teaching environment. In addition, all-day care requires a more differentiated space program, and many of the educational buildings also serve extracurricular purposes with their space offerings. Schools today see themselves as committed employers that offer a modern working environment to teachers. Modern school buildings must therefore offer numerous very different spatial constellations. In the interior and in the open space design, schools should provide differentiated social spaces: Beyond the classroom, community as well as privacy must be provided. In addition, public buildings represent communities architecturally and must serve their surroundings in terms of infrastructure and urban development.

60 Projects

**Format:** 230 × 285 mm
